

Ready to hang with your new best bud? A few simple steps...

Upon receiving Gromeo:

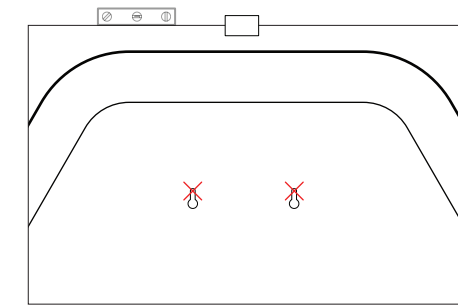

- Make sure that all of Gromeo's parts are included in the shipment.
- Carefully remove all the paper stuffing.

IMPORTANT: If you ordered a pre-planted Gromeo water it within 24 hours of delivery (see watering instructions on the backside of this page). Check that each plant is sitting firmly inside its Growtex pocket. Shipping can cause the plants to become loose.

Parts and Tools

1

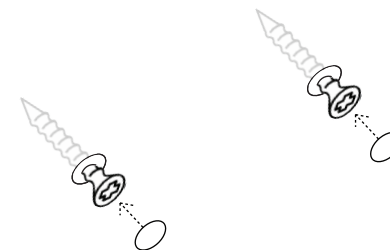

Choose the location on the wall where you want to install Gromeo and tape the paper template in place. Make sure it is level.

2

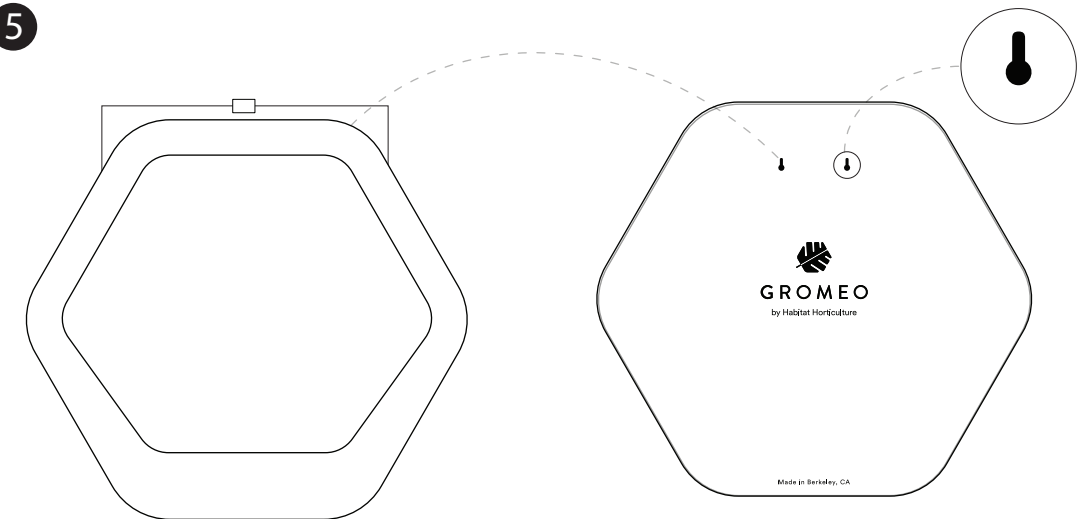

At the X marks, screw the hanger screws into the wall with a screw driver or screw gun. The hanger screws are ideal for wood or drywall, no need to use drywall anchors.

4

Place the screw protector pads on the face of the hanger screws to protect Gromeo's wooden backing.

5

Gromeo is ready to hang!
Using the mounting stencil to guide you, match Gromeo's keyhole slots on its back to the screws on the wall. Ensure the screws lock into the narrow part of the keyhole slot.

6

Ideal for 4 inch potted plants, cuttings or seeds.

Growtex™ Pockets

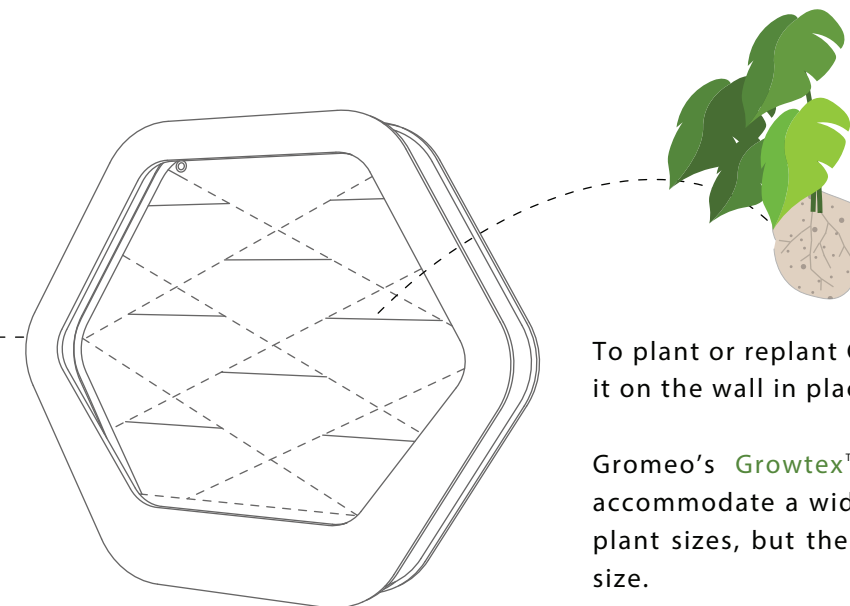

Through capillary action the plants passively absorb water from the bottom reservoir. No drainage needed.

1 gallon water reservoir keeps plants hydrated up to 3 weeks.

Watering:

Fill the 1 gallon reservoir at the bottom of Gromeo with a watering can to the top, make sure it doesn't overflow. Refill once empty, approximately every 1 to 3 weeks.

7

To plant or replant Gromeo, you can either leave it on the wall in place or remove it, it's up to you.

Gromeo's **Growtex™** pockets are designed to accommodate a wide range of plant species and plant sizes, but the most ideal size is a 4" plant size.

Planting Process:

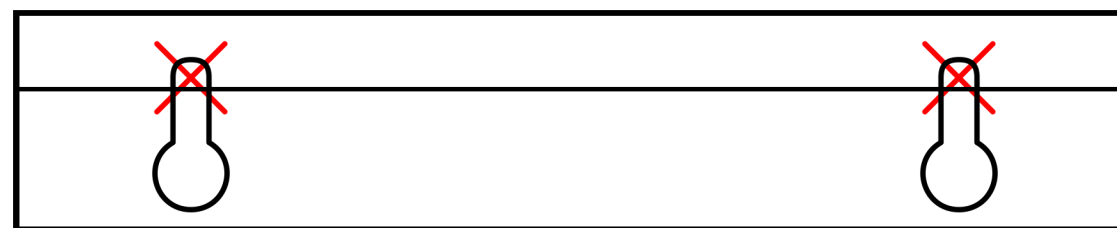

1. Wait until the water reservoir is empty
2. If using 4 inch plants, first water the plant within it's pot so the soil is moist before planting. This will help with my wicking action.
3. Remove the plant you want to replace out of it's pocket.
4. Remove all the excess soil from the pocket.
5. Remove the plant from its pot, open up the Growtex pocket and place the plant inside, it should fit nice and snug.

Please visit www.shop.habitathorticulture.com for more detailed information on how to take care of Gromeo in the FAQs section - Installation and Care Guide.
