

## Zenbooth Solo

## Zenbooth Duo

## Zenbooth Quad

### 1-Person Booth

The Zenbooth Solo is a standalone phone booth, video call station, or quiet space your students need.

#### USE CASES:

- mobile phone booth
- video call office
- privacy booth
- meditation station

#### Desk Options

- Stationary
- Adjustable (electric)

#### Desk Dimensions (both options)

### 2-Person Booth

The Zenbooth Duo is a freestanding meeting space for one-on-ones and private conversations.

#### USE CASES:

- private meeting space
- counseling room
- micro-office
- triage room

#### Desk

- Adjustable (electric)

#### Desk Dimensions

### 4+ Person Booth

The Zenbooth Quad is our most spacious and flexible model, perfect as a meeting room, private office, or mindful space.

#### USE CASES:

- study room
- private office
- wellness room
- group counseling

#### No Desk Options

#### Door Options

- Standard
- ADA Compliant w/ 10" Kick

### Door Radius (all models)

#### Door

- 36.75" wide self-closing door
- 1/2" door threshold
- 19" door handle

### Booth Placement Guidelines

- Booths should be 4" away from walls in order to provide optimal airflow for fan(s)
- Booths can be placed side by side (touching)
- The booth power cord is 10ft long (three-prong) and should be plugged directly into outlet (not a power strip)
- Place booths under an overhead light for better lighting
- Booths facing one another must have at least 75" distance for the doors to open and close without contact
- Place on carpeted floors for optimal sound dampening

# Zenbooth Layout Guide

## How to create the best privacy space for your needs

Our team often gets asked for help in planning where Zenbooths should be placed. This article is intended to give you and/or your interior designer some pointers to help you figure out how many phone booths you need, and where to place them.

However, the first two big guiding principles are: “think flexible” and “less is more”.

## Think ‘Flexible’

Our offices have been rearranged many times and often we end up tweaking what “looks good on paper”. All Zenbooth products can be moved after they have been built with furniture sliders.

We’d recommend brainstorming some variations of layouts with your team and then try the preferred layout. You can even make large cardboard cutouts or tape areas based on the dimensions and see how the phone booths feel in certain configurations.

## Less is More

Creating new space in the office is exciting, but it doesn’t take much to be impactful. Incorporating just a few more private spaces may completely change your team’s working behavior. If it’s your first time getting office phone booths you may want to start with ‘starter’ combinations for a small office are 2x Solos and 1x Quad (or a duo, depending on space).

## How many Zenbooths do I need?

Before phone booths and video conference calls were so popular, a rule of thumb was to have one conference room for every ten employees. But now with hybrid work, the increased desire for private workspaces, and a lot more video calls, that equation shifts.

Start by figuring out what the privacy needs are for different team members. You may find that with certain roles like recruiting or sales, it is advantageous to have a private space available for more than half the day they’re in office. This may in some cases mean one Zenbooth for every two sales people. It sounds like a lot, but it’s far better for the business and the salesperson than them hesitating to make a phone call.

Whereas, a four five-person design teams (20 people) who are spending 2-3 hrs in meetings a day may be able to comfortably share 3 Solos, 1 Duo and 2 Quads. They’ll need less if they have some

days working remotely. As you can see, there are no fixed rules, but a lot can be learnt to predict your team's needs by looking at their calendars.

## Where should the Zenbooths go?

Here's a few ways you can place Zenbooths:

1. Vary location by team

Different teams may have different needs. Some may want them right near their desks, some might not mind a walk.

2. Against walls

The most common placement of a Zenbooth is against a wall, usually close to an outlet. Placement against walls provides minimal visual obstruction.

3. Banks of phone booths

Another common configuration is to put the phone booths in a group. These groups of phone booths can be placed between teams to give each team more privacy.

4. Capping desk ends

Zenbooths can be placed at the end of a bank of desks (or even between desks) to give added visual privacy for those sitting at those desks, and also quick access to their phone booth.

5. Windows

Sometimes the best place to put a phone booth obstructs a window. We'd recommend doing this as a last resort as it means less natural light, and the phone booths can get warm if the sun is bright and cool office air isn't making it into the powerful ventilation system.

## Compliance

Different jurisdictions have requirements and guidance on placement of phone booths. A local general contractor or interior designer may be best placed to give advice if you need this. However, at a national level, some things to be mindful of are:

1. Fire code requirements, especially not obstructing sprinkler systems or fire escape routes (read more about fire [code compliance](#))
2. Accessibility – providing sufficient accessible spaces for your employee, and also ensuring that walkways are clear (read more [about accessibility](#))

# Plan review

Interior designers are often best placed to review plans. However, our team is happy to take a look and give general feedback after you've brainstormed some plans with your team.
